1 [The case for persistent-connection HTTP](#)

Jeffrey C. Mogul

October 1995 **ACM SIGCOMM Computer Communication Review , Proceedings of the conference on Applications, technologies, architectures, and protocols for computer communication**, Volume 25 Issue 4

Full text available: pdf(1.68 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The success of the World-Wide Web is largely due to the simplicity, hence ease of implementation, of the Hypertext Transfer Protocol (HTTP). HTTP, however, makes inefficient use of network and server resources, and adds unnecessary latencies, by creating a new TCP connection for each request. Modifications to HTTP have been proposed that would transport multiple requests over each TCP connection. These modifications have led to debate over their actual impact on users, on servers, and on the net ...

2 [Video adaptation: RITA: receiver initiated just-in-time tree adaptation for rich media distribution](#)

Zhichen Xu, Chungqiang Tang, Sujata Banerjee, Sung-Ju Lee

June 2003 **Proceedings of the 13th international workshop on Network and operating systems support for digital audio and video**

Full text available: pdf(276.91 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Application-level multicast networks overlaid on unicast IP networks are increasingly gaining in importance. While there have been several proposals for overlay multicast networks, very few of them focus on the stringent requirements of real-time applications such as streaming media. We propose RITA (Receiver Initiated Timely Adaptation) framework for an efficient overlay multicast infrastructure. RITA is based on a combination of landmark clustering and RTT measurements, and is particularly sui ...

Keywords: DHT, multicast, overlay networks, streaming media

3 [Interactive global illumination in dynamic scenes](#)

Parag Tole, Fabio Pellacini, Bruce Walter, Donald P. Greenberg

July 2002 **ACM Transactions on Graphics (TOG) , Proceedings of the 29th annual conference on Computer graphics and interactive techniques**, Volume 21 Issue 3

Full text available: pdf(13.82 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper, we present a system for interactive computation of global illumination in

dynamic scenes. Our system uses a novel scheme for caching the results of a high quality pixel-based renderer such as a bidirectional path tracer. The Shading Cache is an object-space hierarchical subdivision mesh with lazily computed shading values at its vertices. A high frame rate display is generated from the Shading Cache using hardware-based interpolation and texture mapping. An image space sampling sc ...

Keywords: Monte Carlo techniques, illumination, parallel computing, ray tracing, rendering, rendering systems

4 MPEG-4 Video transmission over wireless networks: a link level performance study

Ji-An Zhao, Bo Li, Chi-Wah Kok, Ishfaq Ahmad

March 2004 **Wireless Networks**, Volume 10 Issue 2

Full text available:  pdf(306.85 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

With the scalability and flexibility of the MPEG-4 and the emergence of the broadband wireless network, wireless multimedia services are foreseen to become deployed in the near future. Transporting MPEG-4 video over the broadband wireless network is expected to be an important component of many emerging multimedia applications. One of the critical issues for multimedia applications is to ensure that the quality-of-service (QoS) requirement to be maintained at an acceptable level. This is further ...

Keywords: DBMAP with marked transitions, DBMAP/PH/1 priority queue, HMM channel, PH-type distribution
